Brand New Book \*\*\*\*\* Print on Demand \*\*\*\*\*.Excerpt from The Radiography of the Chest Line, Vol. 1: Pulmonary Tuberculosis During the present decade, the manufacture of more powerful installations, the improvement of special technique, and the gradual accumulation of knowledge, have greatly enhanced the value of X-ray examination in the diagnosis and prognosis of diseases of the chest. Nevertheless, it is always expedient to check and compare the results by means of the usual methods of investigation; although, on the other hand, in many instances radiography alone has proved absolutely decisive. The real foci of disease may be concealed by superimposed shadows, or by the persistent sequelae of obsolete lesions. Consequently, the correct interpretation of pulmonary opacities may become a very difficult problem, and necessitate the exercise of expert clinical skill as well as a wide radiological experience. For this reason, the data of physical examination have been summarised and included, whenever possible, throughout the book. I have attempted to describe the majority of the types of pulmonary tuberculosis, with the commoner localities of incipient disease, and have adopted, for this purpose, a radiological classification which is personal and provisional. In order to anticipate criticism, I may emphasise the great complexity of the subject and the impossibility - in the absence of anatomical control - of placing accurately many intermediate forms. For instance, examples of perihilar nodal tubercle may assume a pseudolobar expression; cases of mild diffuse fibroid arc in reality attenuated, often arrested; whilst some of those depicted under the heading of minor phthisis might have been included, with almost equal justice, in the following chapter on fibroid affections of the lung. The large number of radiograms permitted by the generous consideration of...
