Brand New Book \*\*\*\*\* Print on Demand \*\*\*\*\*.Excerpt from A New Type of Hereditary Brachyphalangy in Man No other field in biology has within recent years yielded such far-reaching and important results as the field of genetic work. Thanks to the introduction of analytical experimentation, one after another of the central problems in natural science has been solved or brought near to a solution - problems which after so many vain attempts seemed almost beyond the reach of ordinary scientific analysis. The progress has been so considerable that one of the most prominent workers in this field, T. H. Morgan, in 1916 felt justified in stating: I venture the opinion that the problem of heredity has been solved. It scarcely needs to be pointed out that the broad general significance of the hereditary phenomena makes it urgently necessary to determine whether the results obtained through experimental work with animals and plants may be applied to the inheritance of human characters. There was a priori no reason to doubt that this would prove to be the case, and several human characters, physiological as well as pathological, have been shown to be inherited in a way fully accordant with the laws established through experimental genetic work. Human material, however, presents several serious obstacles for genetic analysis. Not only the principal handicap involved in the lack of experiments, but also other special features make man a very poor subject for work in heredity. The number of individuals within each family is very small; intermarriage is comparatively rare; the interval of time between the generations is very long; and the characters studied are rarely amenable to accurate measurements. Only the application of the most general hereditary laws, those...
