Ground-water chemistry, in turn, reflects samples indicated that bicarbonate was the primary source of the chemical changes along flow paths from water-rock acid-neutralizing capacity. interactions and from chemical additions to ground water from human activities ( especially nonpoint sources ). Water Hydrogeologic and Human Controls on chemistry was evaluated by major-ion water type and by Water Type selected constituents associated with nonpoint sources within the study area. Ground-water chemistry, and by inference, the water chemistry observed in base flow, evolves as water moves through a ground-water flow system ( for example, Back, Major-Ion Water Type 1966; Wunsch, 1993; Stuyfzand, 1999 ) ( figs. 4A and 4B ). This Major-ion concentrations of water samples classified chemistry can be altered ( especially in shallow ground-water ) as water types provide a useful framework for interpretation by downward leaching of contaminants from human activities, of the waters sampled in this study. Differences in relative such as application of salt to roads. ion concentrations among basins and within...
